

A conceptual illustration for the Maharashtra Visitor Platform. The scene is a lush, mountainous landscape at sunrise or sunset. In the foreground, a stone path leads up a hill towards ancient rock-cut temples. Two hikers, a man and a woman, are walking away from the viewer on the path. To the right, a large rock-cut temple with columns and a standing Buddha statue is visible. In the background, a fortified hilltop (fort) sits atop a mountain, with two waterfalls cascading down the slopes. The sky is hazy with soft light.

Maharashtra Visitor Platform

Plan the trip, pay once for every ticket,
and walk in even when there's no signal.

HashCase

FOR THE DIRECTORATE OF TOURISM, GOVERNMENT OF MAHARASHTRA / SEPTEMBER 2026

Conceptual illustration

“Technology and AI are helping us bring these experiences closer to travellers through **personalised travel planning, seamless digital access, and immersive storytelling.**”

Chandrashekhar Jaiswal

General Manager, Department of Tourism, Maharashtra · ImagiNxt 2026, Mumbai, 22 May 2026

Personalised planning

A trip plan that fits the family, the budget and how far they can walk.

Seamless access

Every ticket for the day bought once, before leaving home.

Storytelling

Each site explained in the visitor's language, from the department's own content.

This proposal is how those three ideas turn into something visitors can use.

A family sets out for Kanheri Caves

Inside Sanjay Gandhi National Park, Borivali. Three tickets, three counters, three different authorities.

Park gate

Buys a park entry ticket

Ticket 1

Forest Dept.

6 km inside

Pays again for the shuttle or vehicle

Ticket 2

Park transport

Cave counter

A third ticket, from a different department

Ticket 3

ASI

Turns back

No signal. Card and UPI fail. No cash.

They did nothing wrong. Nobody told them the day needed three tickets, or that the last counter might not take digital payment.

Four gaps behind one bad morning

01

No warning

Nothing told the family, before they left home, that Kanheri needs its own ticket or what it costs.

02

No single payment

Three authorities, three counters. The state can't sell a visit to its own monument in one go.

03

No offline option

The system assumes the network works. At many of the best sites, it doesn't.

04

No record

The family goes home and the department never hears about it. A lost visit leaves no trace.

➔ **The fourth gap is the one that keeps the others alive.** Once the department can see lost visits, it can fix the rest.

One app. Four jobs.

A website and mobile app for anyone visiting Maharashtra, running on the department's own content, registered operators and ticketing.

PLAN

Builds a day-by-day trip around who is travelling

PAY

Every ticket in one payment, valid offline

PROMOTE

Offers that move people to quiet days and places

ANSWER

What's open, restricted or costs what, today

Nothing is scraped from the internet. That's what makes it the state's product and no one else's.

A trip plan built around the family, not a brochure

THE VISITOR TELLS IT

How many days

Starting point

Kids or elderly along

Budget

How much walking

Forts, coast, wildlife, food...

Language

IT HANDS BACK

A day-by-day plan across the department's own sites

Every ticket the trip needs, with prices, upfront

Travel times and last entry at each gate

Stays and guides only from registered operators

Live warnings: closures, restrictions, monsoon orders

Illustrative screen

One payment for a day with many gates

TODAY

Five payments, five queues, several authorities. Often cash-only where it matters most.

Revenue you can see

Every sale is recorded and reconciled, not a paper stub in a cash box.

Crowds you can manage

Advance tickets mean a site can be capped, slotted or priced by time.

WITH THE PLATFORM

One payment
One QR pass

Forest Department

ASI

MTDC

Registered operator

The money is split in the background and settled to each authority.

There's already a way in: ASI sells online tickets for 170+ monuments and put them on the ONDC network in January 2026 (PIB).

BUILT FOR WEAK SIGNAL

Buy at home. Walk in without signal.

The best sites usually have the worst network. So the pass is designed to work without one.

At home

Ticket bought and saved on the phone while there's signal.

At the gate

A signed QR code. The gate phone checks it with no connection.

On site

Maps, timings and site stories are already downloaded.

Later

Scans upload when the gate device finds signal. Nothing is lost.

One limit: a pass reused at another offline gate is only caught after devices sync. For single-entry tickets that window is small.

Conceptual illustration

Using offers to steer where and when people go

When the state issues the ticket, it can also shape the offer. The department hasn't had this lever before.

Fill quiet days

Weekday, off-season and monsoon offers

Spread the map

Bundles for districts that see few visitors

Reward good choices

Multi-site passes, longer stays, student and senior rates

AND FOR ONCE, A CAMPAIGN CAN BE MEASURED BY VISITS

Today campaigns are paid on retainer and judged on reports.

The department sets every rate. The platform only carries it out. Offers on ASI or Forest tickets need their own sign-off.

An assistant that knows today

A normal chatbot repeats what was published online, sometimes years ago. This one answers from the department's current records, and shows where each answer came from.

Facts come from approved sources

Every answer shows its source and time

If a feed is out of date, it says so

Is Bhushi Dam open this Sunday?

Closed to visitors this weekend under the collector's monsoon order.

District order · updated 8:10 am

Which homestay near Malvan has a valid fire certificate?

Three registered homestays currently hold one. Here they are.

Registration records

Explain this cave to me in French.

Les grottes de Kanheri sont un ensemble de plus de cent grottes...

Department site content, translated

Illustrative conversation

“Why not just use ChatGPT?”

A general AI model knows what’s on the internet. It doesn’t know what’s officially true at a site today.

Describe the caves

See today’s restriction order

Tell a licensed operator from an unlicensed one

Sell and settle a ticket

Work without a network

Give the department a record

General AI

Department platform

The edge isn’t the AI. It’s the data and authority that only the department has.

Built on systems the department already has

Read-only links can start early. Booking and settlement need each ticketing authority to agree; ASI and Forest will take the longest.

WORTH KNOWING

Goa has already started down this road

In July 2026, two Goan newspapers reported that Goa Tourism had floated an RFP for an

“Integrated Sovereign AI-Driven Experience Tourism Platform and Infrastructure”

AS REPORTED, IT COVERS

- New website and app
- Personalised itineraries
- Emergency response
- Multilingual assistants
- Integrated ticketing
- On-premises AI compute

A 30-year public-private concession.

The smaller destination is moving. The bigger one hasn't started.

The Navhind Times and The Goan, 16 July 2026. We haven't seen the tender document and its status is unconfirmed. Goa figure is indicative, pending the Ministry of Tourism compendium.

Thank you

The family that turned back at Kanheri is the whole case.
Everything in this platform is there so it doesn't happen again.

IN SHORT: ONE PLATFORM FOR THE MAHARASHTRA VISITOR

Plan

A day-by-day trip built around who is travelling, with every ticket and warning upfront.

Pay

One payment for every gate, split and settled to each authority.

Promote

Department-approved offers that move visitors to quiet days and places, measured by visits.

Answer

Current, sourced answers from the department's own records, in the visitor's language.

 Works offline at the gate, and runs on data the department already owns. Next step: a small pilot at a few sites.
